

FURKAN KILICASLAN

furkankilicaslan@gmail.com • kicsln.com • linkedin.com/in/kicsln • Istanbul, TR

Gameplay programmer with 4+ years shipping AAA and indie titles in C++, specializing in systems tightly coupled to combat and player control — camera, cover, and interaction systems built on data-oriented frameworks.

EXPERIENCE

Gameplay Programmer, IO Interactive

Jul 2023 – Present

- Own camera systems for 007: First Light in C++ — systemic movement, combat cameras (ranged/melee), cover assists, and transition systems built on a data-oriented framework, reading state from and reacting to combat, locomotion, and cover systems in real time.
- Design and ship gameplay features end-to-end with design and cinematic arts teams, authoring interfaces other systems query to drive camera behavior.
- Maintain frame-budget performance targets through ongoing profiling and optimization on a shipped AAA title.

Software Engineer, Taleworlds Entertainment

Feb 2022 – Jun 2023

- Shipped gameplay systems in C++/C# for Mount & Blade II: Bannerlord — new quests, the perk system, and modding support improvements.
- Contributed to integration test coverage and participated in code reviews using Plastic SCM and JIRA.
- Collaborated with design, engine, UI, and art teams to iterate on gameplay ideas and systems.

Audio Software Engineering Intern, Treyarch

May 2021 – Aug 2021

- Extended vehicle sound systems in C++ for the Call of Duty engine; designed and pitched a multiplayer mode using the studio's proprietary scripting language.

Software Engineering Intern, Taleworlds Entertainment

Jun 2020 – Aug 2020

- Developed gameplay features, modules, systems, and tools for Mount&Blade II: Bannerlord.
- Designed and implemented the first performance benchmark scene prototype, now shipped in the game.
- Automated XML formatting pipelines for the design team.

EDUCATION

University of Southern California, M.S. Computer Science

2019 – 2021

- Fulbright Master's Scholar — 1 of 70 selected from the Fulbright Türkiye cohort of 2019

Bahcesehir University, B.E. Computer Engineering & B.S. Genetics and Bioinformatics

2014 – 2019

- Erasmus+ exchange participant at University of Hertfordshire, UK (2017) and TU Berlin, DE (2018)

PROJECTS

The Trials of Snowshoe Thompson

2020 – 2021

- Managed the audio production pipeline from sound design through gameplay implementation.
- Programmed all SFX, music, and mixer implementations in Unity with C#.

Liquidators — 96% Positive on Steam

2019 – 2020

- Led level design and iterated on encounter pacing for a shipped indie title built in Unreal Engine 4.
- Mentored teammates on engine workflows.

ADDITIONAL INFORMATION

- **Technical Skills:** C++, C#, Data-Oriented Design, Multithreaded/Concurrent Systems, 3D Vector Math & Linear Algebra, Game Engine Architecture, CMake, Bash, Git, Perforce, Plastic SCM, Console Development, Unreal Engine (UE4), Unity, FMOD, Blender, Substance, JIRA, Agile, Visual Studio, Lua, Python, JavaScript, React, Node.js
- **Languages:** Turkish (Native), English (Fluent), German (Basic), Spanish (Basic), Polish (Basic)
- **About Me:** Got my bicycle crushed by a tank, backpacked alone through Spain, visited Chernobyl Nuclear Power Plant, played over 10,000 hours of video games
